

Monthly Network Report

2026/09

Device Summary

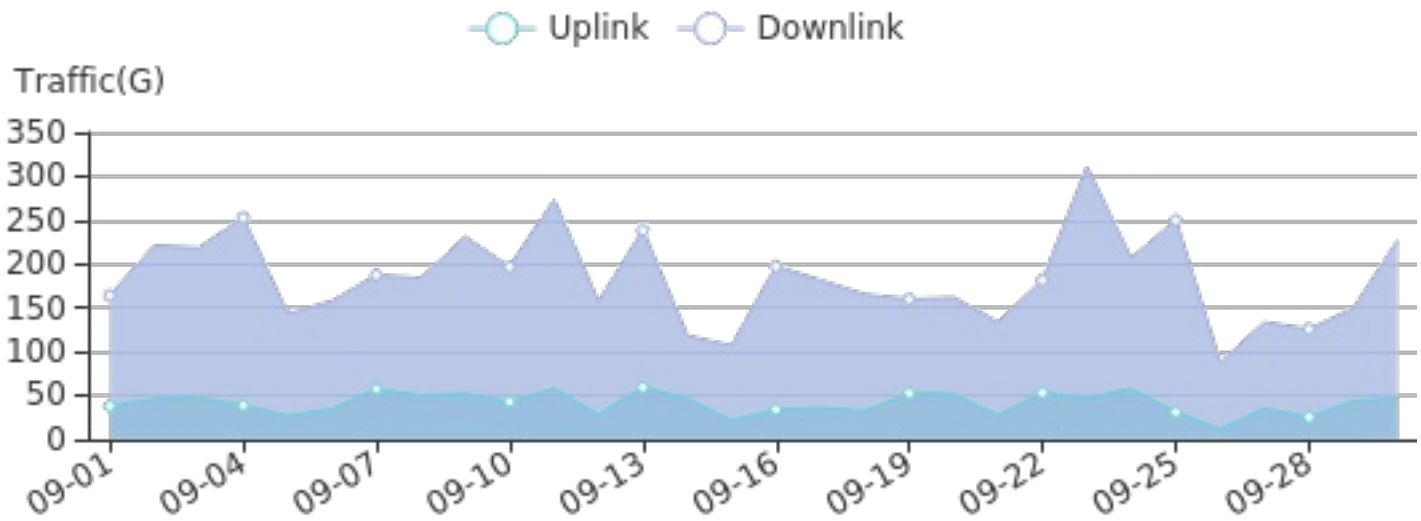

When the device goes offline, please

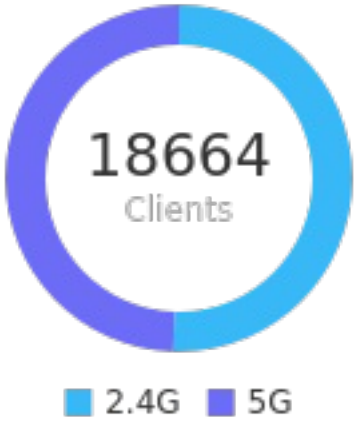

1. check the ACS URL configuration;
2. check the network connection between the device and cloud.

Device	Total	Online	Offline	Not Online Yet
AP	13	13	0	0
Switch	9	9	0	0
Gateway	0	0	0	0
Home Router	0	0	0	0
Bridge	0	0	0	0
AC	0	0	0	0

Traffic Summary

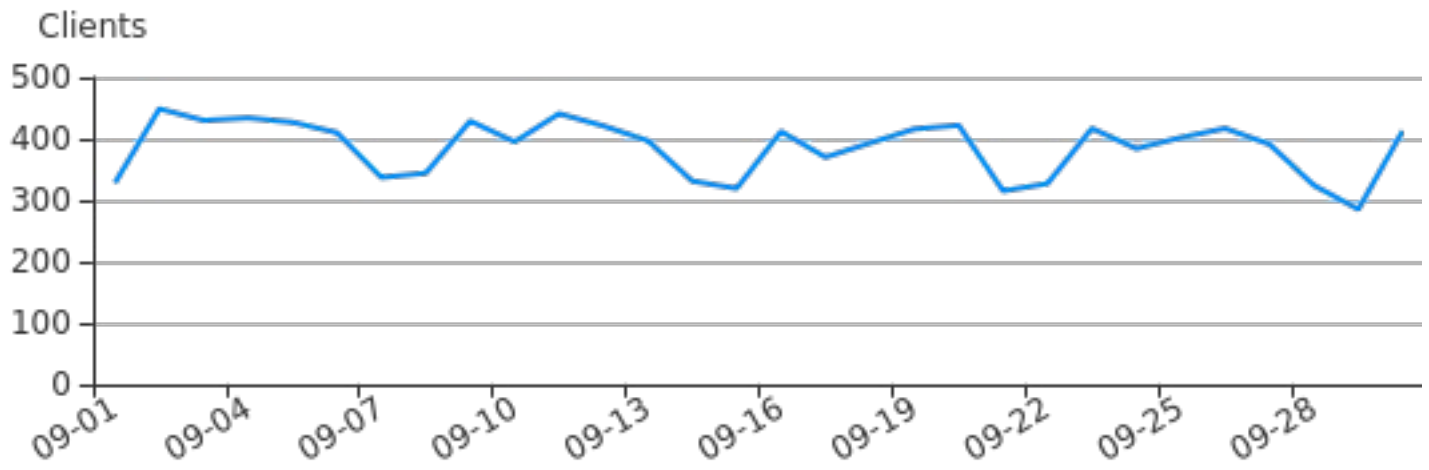

2.4G / 5G Clients

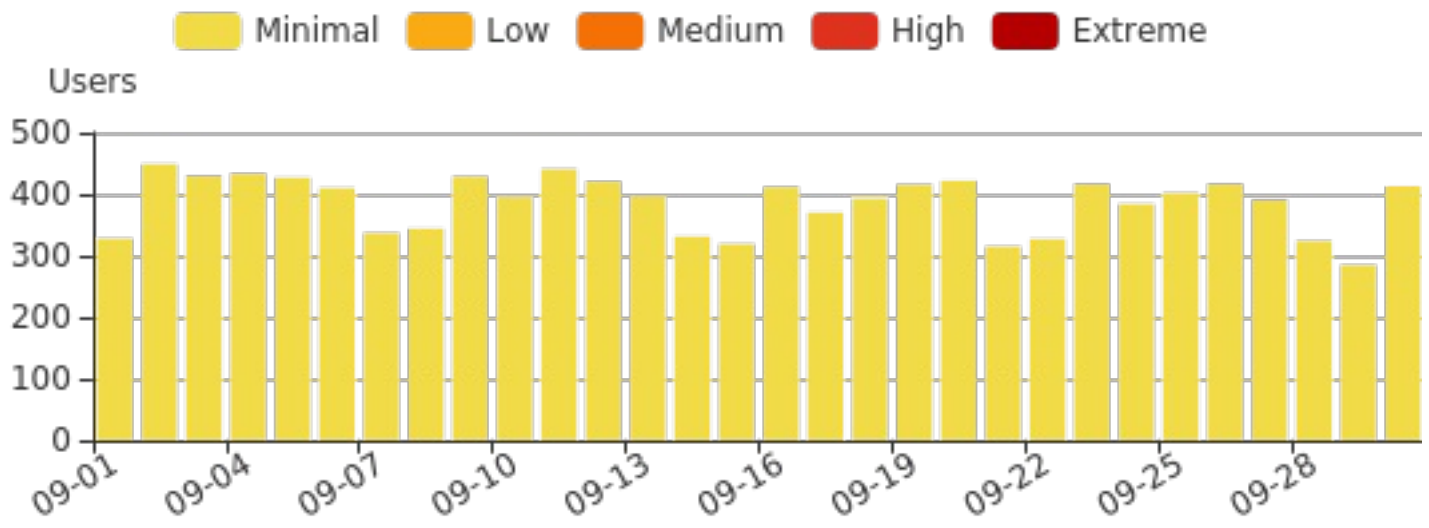

5G-Prior Access detects clients capable of 5 GHz operation and steers them to that frequency, while leaving 2.4 GHz available for legacy clients.

It is not recommended to enable this function if most of clients only support 2.4GHz

WiFi Client Summary

WiFi Client Activity

Activation is evaluated based on online duration and traffic volume (from highest to lowest)

Minimal: ≥100KB

Low: ≥1h/day and ≥500KB

Medium: ≥2h/day and ≥2MB

High: ≥4h/day and ≥5MB

Extreme: ≥8h/day and ≥10MB
